MEC Agent - Install & Connect

Requirements

Python 3.10+ / Windows, or the prebuilt MEC_Agent.exe.
.env values on the agent: see mec_agent/.env.example

Connect a device (pairing flow)

1. Generate a pairing code on the server (see above).
2. Start the agent:
   MEC_Agent.exe (or: python mec_agent/agent.py --pairing CODE)
3. The agent auto-registers, then sends a heartbeat every 10s.
4. In the UI go to MEC Infrastructure - the new MEC-xxx node is ONLINE.

Agent APIs it calls

POST /api/mec/register/   (pairing_code, system_name, server_url)
POST /api/mec/heartbeat/   (mec_id, auth_token, cpu/ram/disk/latency...)
GET /api/mec/<id>/next-task/   (assigned task, if any)
POST /api/mec/<id>/report-result/   (execution_time, success, metrics)
All authenticated by Authorization: Token <agent-token> + X-MEC-ID header.

Revoking

Admin can revoke a device (nav -> MEC Infrastructure -> Revoke);
revoked devices are blocked and never receive tasks.
