Review 0 - Project Documentation

Deliverables

1. SecureDT Django/MySQL/DRF web app with 15 pages + session login.
2. Prebuilt Windows MEC agent ..... release/MEC_Agent.exe
3. Google Drive cloud module (simulation-compatible).
4. Automated tests ..... tests/ (12 passing).
5. PDF documentation set (this folder).
6. Deployable ZIP ..... Intelligent_Secure_
   Task_Scheduling_Django_MySQL_FINAL.zip

Verified behaviours

- All pages render 200; endpoints authenticated via DRF/session.
- Task lifecycle: dispatch, next-task, report-result, requeue.
- Offline detection: stale MECs are marked OFFLINE and skipped.
- Multi-MEC scaling: dashboards adapt to any number of agents.
- Cloud upload/list/download round-trips to the simulator.
- AI model trains and predicts (RF, local fallback) - ai-status POST.

Security notes

- .env (secrets) is excluded from the release ZIP.
- Tokens + pairing codes = device identity; revocation is instant.
- Attack simulator is fully simulated; it never performs real attacks.
