SecureDT - Dataset Guide

Synthetic dataset overview and validation

The six synthetic datasets are produced under a fixed seed (config.DATASET_SEED) so generation is reproducible. They are labelled, schema-validated and never represent real individuals or systems.

	Rows	Purpose
	10,000	Workloads: type,
	5,000	Attack events with
	3,000	Resource telemet
	2,000	Algorithm runs: la
	10,000	Feature rows + la
	5,000	Storage integrity/r

Validating the datasets

```
python scripts/validate_dataset.py
python scripts/dataset_check.py
```
