SecureDT - Dataset Manager Guide

Registry, big-data, normalisation and quality toolkit

The Dataset Manager page (/datasets) provides a registry of built-in synthetic datasets plus public IDS references, one-click big-data generation, and data toolkit pages for validation, normalisation and quality reports.

Registry (16 synthetic, 5 public)

	Rows	Source
	10000	SYNTHETIC DAT
	5000	SYNTHETIC DAT
	3000	SYNTHETIC DAT
	2000	SYNTHETIC DAT
	10000	SYNTHETIC DAT
	5000	SYNTHETIC DAT
	50000	SYNTHETIC DAT
	50000	SYNTHETIC DAT
	2886020	PUBLIC DATASE
	16800000	PUBLIC DATASE
	2576736	PUBLIC DATASE
	461043	PUBLIC DATASE

Big-Data Generation

Streams up to 10,000,000 rows deterministically into a chunked CSV (default 10,000,000 rows). Sampling, describe, aggregation and export are chunked so 1M+ rows stay within normal memory. Lazy Parquet/SQLite conversion is enabled when pyarrow/duckdb are installed.

Normalisation

Converts task/attack/storage CSVs into one UnifiedEvent schema so the timeline, analytics and exporter read a canonical shape from any source file.

Data Quality

Per-file quality reports (missing values, duplicates, invalid numerics, out-of-range, label balance) with a 0-100 score + grade, cleaning to a new CSV, and JSON/CSV report export.
